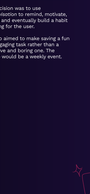
# Case Study 2

Creating a new engagement feature to encourage users to save more frequently.

## Context

There are multiple ways one can invest in gold using *Jar* app. *Daily Savings*, *Manual Savings*, and *Round-offs*.

In the case of *Manual Savings*, the user can enter an amount between ₹10 to ₹1,00,000, and make a one-time investment in gold.



## Challenge

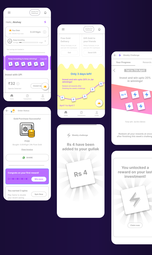
*Manual Savings* users who intend to build a habit of saving, would often tend to forget saving on a regular basis. Notifications were the only way of engaging with the user outside of the app and they had a low response rate.

The ultimate goal was to increase the frequency and the ticket size of a manual users' savings.

## Solution Approach

The decision was to use incentivisation to remind, motivate, reward and eventually build a habit of saving for the user.

We also aimed to make saving a fun and engaging task rather than a repetitive and boring one. The feature would be a weekly event.



## Brainstorming

Hence, gamification became an important aspect of the feature.

We discussed around themes for the feature with examples from real life as a metaphor.

Personification of the feature as someone who visits the user every week, bearing gifts, which the user looks forward to.

## Onboarding Stories

Onboarding Lotties v1

## First Card Won Flow

## Week's Challenge Won flow

## Responsibilities

Scoped, defined the theme, story and framework of the feature.

Created user journeys and flows, and implemented through lo-fi, mid-fi and hi-fi wireframes.

Worked with developers to ensure expected outcomes of UX as well as UI, through multiple *Fit n Finish* checks.

## Team

Product Manager, Product Designer, Visual Designer, Frontend Developer, Backend Developer.

## Impact

The feature challenge is completed by **1L+ users every week.**

## Learnings

Simplifying and breaking down the game into smaller steps helps with understanding.

Repetition of information might help the user understand a feature better.

Rewards' triumph most other incentives and obstacles for the user.
